SN5G-3.25x8.00-N-1.38-2-T-H-B-1-1-X-

* To order standard SAE #12 ports on 3/4", 4" and 5" bores, use T. (N5 only)
 † To order oversize SAE #16 ports on 3/4", 4" and 5" bores, use S. (N5 only)

• HLT II not available in 1 1/2" bore. Consult factory.
 ▲ Cushions not available in HLT II; not available in 1 1/2" bore with all other configurations.

Electronic Feedback Cylinder Design Features

A HLT II Transducer

- Corrosion-resistant stainless steel transducer is compatible with virtually all hydraulic fluids.

B HLT II Electronics

- Encapsulated electronics, housed within the solid steel end cap, provide maximum protection from shock, vibration damage and external elements.

C HLT II Noncontact Electronic Feedback Magnet

- Located in rod thread
- Nothing to wear out
- No speed limitation

D Long Life Urethane Rod Seals (N5 and HR5)

- The Urethane "Ultra-Seal" standard through 8" rod diameters on N5 and HR5 cylinders providing the optimum in long life and sealing.
- Nitrile lip-type seals are standard on AN5, LAN5 and R5.
- Special seals are available for lower friction and fluid compatibility.

E Piston Seal

- O-ring loaded teflon radial seal
- Low-friction for positive sealing and smooth actuation
- Special seals available for lower friction and fluid compatibility

F Piston Wearband

- Provides low-friction piston bearing surface, reducing wear and maximizing life

G Heavy Duty Rod Cartridge

- Machined from gray iron for maximum bearing support and wear resistance
- Unitized, threadless assembly is pilot fitted into the head on a precision-bored diameter to assure concentricity

Specifications

Bore Sizes: 1½" through 30"

Media: Air, inert gases and hydraulic fluids.
Consult factory for other media.

Pressure Ratings: N5 – 3000 psi hydraulic – nominal
HR5 – 1500 psi hydraulic – nominal
AN5, LAN5 – 250 psi pneumatic

Temperature: -40°F to 158°F standard

- Notes:**
- 1) Mounting styles are NFPA interchangeable for all bore sizes.
 - 2) Envelope mounting dimensions are not to NFPA standard for certain bore and rod size combinations. Refer to the dimensional charts in this brochure and the respective N5 or R5/A5 catalog for dimensional interchangeability.
 - 3) HLT II not available in 1½" bore. Consult factory.

National
FLUID POWER
Association
MEMBER

H Teflon Tube Seals

- Superior design to prevent leakage
- Compatible with virtually all fluids

I Precision Steel Heads and Caps

- Provides truly flat and parallel mounting surfaces
- Insures correct alignment of tubing and rod cartridge

J Damage-Resistant Piston Rod

- For 1" through 4½" diameters 90,000 to 100,000 minimum psi yield, case hardened and hard-chrome plated steel is used.
- For 5" diameters and above 41,000 to 80,000 psi yield, hard-chrome plated steel is used.
- All rods are polished to 8-14 micro inch finish for long seal life.
- 17-4 PH stainless steel and other materials also available.

K Double-Lipped Rod Wiper

- Nitrile double-lipped rod wiper removes foreign materials from the exposed rod to extend rod-seal life.
- The standard rod wiper is nitrile material through 5½" rod diameter, Viton for 7" through 10" diameter rods.
- Metallic rod scraper and low-friction wipers are also available.

SAE Ports

- SAE ports standard on N5 and HR5; NPTF ports available at no extra charge
- NPTF ports standard on AN5, LAN5 and R5.
- Metric, BSP, Manifold, Flange and other porting options are available

Standard Design Options

Metallic Rod Scrapers

A Metallic Rod Scraper provides increased rod seal life by removing abrasive contamination from the rod in severe applications.

Wearbands

Bronze-filled Teflon wearband material reduces friction and wear in applications where side-load is present.

Rod Boots

A rod boot surrounds the piston rod with an external, expandable cover to protect the rod surface from external contamination. Requires additional rod length which is determined by the cylinder stroke.

Low Breakaway Piston

A low breakaway piston reduces running friction and utilizes a bronze-filled Teflon wearband with a bi-directional, o-ring energized, bronze-filled Teflon piston seal.

Drainback Ports

Drainback ports are used to return fluid to the tank that accumulates between the rod seal and rod wiper. Port position No. 1 is standard with alternate locations at 2, 3 and 4. $\frac{1}{16}$ " NPTF is standard on $\frac{5}{8}$ " and 1" diameter rods. $\frac{1}{8}$ " NPTF is standard on larger rod diameters.

Air Bleeders

$\frac{1}{8}$ " NPTF bleeders are located in the tube or in the head and cap when specified. SAE #2 bleeders located in the head and cap are also available when specified. All bleeders may be located in positions 1, 2, 3 or 4.

Special Rod Ends

Modifications of standard rod ends or completely special rod end styles are available to meet unique rod end connection requirements. (See page 33 for standard rod ends.)

Special Ports

Metric, BSP, Manifold, Flange and other porting options are available to meet specific requirements. (See page 24.)

Extra Heavy Chrome Tubes and Rods

Added wear and corrosion resistance are available by specifying Extra Heavy Chrome (.002" to .003" thick).

Plating

Electroless Nickel, Cadmium and other plating finishes are available for corrosive, washdown, pharmaceutical, and other applications.

Stainless Steel Piston Rods

Piston rods in 300 and 400 series and 17-4 PH stainless steel are available for those applications requiring increased corrosion resistance.

Special Coating and Painting

Cylinders can be prepared with a primer coat or epoxy, lacquer, or enamel paint finish coatings to customer specifications. Synergistic, Nitrocarburizing and other material treatments are also available for special applications.

Special Materials

Bronze rod cartridges, complete stainless steel cylinders or other special materials are available to meet most unique material requirements.

The Hydro-Line HLT II

Encapsulated Linear Displacement Transducer

Hydro-Line HLT II linear displacement transducers are precise, durable, cost-effective alternatives to linear potentiometers. In many applications, they can also replace LVDTs and linear encoders. Well protected within the core of the cylinder, the HLT II not only measures the position of the moving elements of an actuation system, but also remains untouched, and unaffected by even the harshest elements. The innovative encapsulated design and engineering along with the rugged construction of Hydro-Line HLT II transducers guarantee the best reliability, precision and durability in even the toughest industrial environments. In addition, problems associated with wear in linear potentiometers, and cable routing and control in linear encoders are eliminated. Furthermore, HLT II models require no external signal conditioning. Whether position sensing requirements are simple or complex, the Hydro-Line HLT II will help find solutions in a form factor and mounting configuration that fits any application.

Improved Design

As a leader in actuation products, Hydro-Line has enhanced the design of the HLT II to deliver superior accuracy in linear displacement technology. The cylinder's capabilities have been increased with a longer displacement range (up to 142") and smaller non-linearity ($\pm 0.02\%$). Absolute rather than incremental output eliminates the need for re-homing in power-down situations. A non-contact sensing element virtually eliminates the wear, noise and erroneous signal problems inherent in other linear displacement sensing devices.

The HLT II transducer is available in either analog or digital format. Tighter precision, along with a higher operating temperature (now 185° F) and faster response time, make the Hydro-Line HLT II an ideal solution for a wide range of industrial applications requiring strict motion control.

Specifications

Characteristic	Description/Specification
Supply Voltage	24 Vdc $\pm 20\%$ or ± 15 Vdc $\pm 2\%$ or ± 12 Vdc $\pm 2\%$
Current Draw	≤ 90 mA (≤ 1 A inrush)
Displacement Range	2" to 142" stroke
Output Update	≤ 1 ms
Non-Linearity	$\pm 0.02\%$
Repeatability	Resolution + Hysteresis
Hysteresis	< 0.00004 "
Resolution	<i>Analog:</i> Infinite <i>Pulse:</i> Defined by control
Shock Rating	100g /11ms (single hit)
Vibration Rating	12g (10 to 2,000Hz)
Operating Pressure*	3000 psi continuous, 8000 psi static
Operating Temperature	-40 to 185°F (-40 to 85°C)
Protection for Micro-Change Connector and Cable Assembly	NEMA 6P; IP68 (when cable is mated to connector)
Washdown Pressure	1000 psi (when cable is mated to connector)
Molded Cable Assembly	22 AWG, PVC insulated, metallic braid, fine stranded copper conductors, yellow PVC jacketed, 300 V, 3 amp, 105°C U.L. recognized, C.S.A. certified
Outputs	<i>Analog:</i> 0 to +10Vdc, -10 to +10 Vdc, -5 to +5 Vdc, 4 to 20 mA, 0 to 20 mA (All analog outputs can be forward and reverse acting) Analog Adjustability: 15% adjustment of full scale <i>Digital:</i> RS422 Start/Stop (leading or trailing edge active) Pulse-Width Modulated (Internal or External Interrogation with 2,4,6 or 8 recirculations)
Maximum Cable Length	<i>Analog:</i> Voltage output 50 feet, Current output 500 feet <i>Digital:</i> 1600 feet

Specifications are subject to change without notice. Contact Hydro-Line for verification of specifications critical to your requirements.

* Compare these specifications to cylinder specifications. Use the proper limiting specifications.

Transducer Specifications – Temposonics L Series

Noncontact Transducer

Hydro-Line utilizes MTS Temposonics® feedback technology, a magnetostriction device. Selection of feedback output should be matched to the control systems to ensure optimum performance of the positioning system.

Specifications

Characteristic	Description/Specification
Supply Voltage	Strokes $\leq 60"$; +13.5 to 26.4 Vdc ($\pm 0\%$); Strokes $>60"$; + 24Vdc ($\pm 10\%$)
Current Draw	Analog: 120 mA Digital: 100 mA Typical
Null Space	Null space is 2" unless otherwise noted
Dead Band	Dead band is 2.5" from tip of transducer
Displacement Range	Analog: 1" to 78" stroke Digital: 1" to 120" stroke
Head Enclosure	Aluminum die-cast head, IP 67 stainless rod and flange
Non-Linearity	$\pm 0.02\%$ or $\pm 0.0002"$, whichever is greater
Repeatability	$\pm 0.001\%$ of full stroke or $\pm 0.0001"$, whichever is greater
Hysteresis	0.0008" maximum
Resolution	Analog: Infinite Digital: $1 \div [\text{gradient} \times \text{Crystal Freq. (mHz)} \times \text{circulation}]$; Max resolution: 0.00025"
EMC Test*	DIN EN 50081-1 (Emissions) DIN EN 50082-2 (Immunity)
Operating Temperature	-40°F to 158°F
Operating Pressure **	3000 psi continuous, 5000 psi static, 10,000 psi spike
Shock Rating	100g (single hit) / IEC standard 68-2-27 (survivability)
Update Time	Analog: $\leq 1\text{ms}$ Digital: Resolution and Stroke dependent; Minimum = $[\text{Stroke (specified in inches)} + 3] \times 9.1 \mu\text{s}$
Output (absolute)	<i>Analog:</i> Voltage and current output available – see L Series ordering guide <i>Analog Adjustability:</i> Field adjustable zero and span to 5% of active stroke <i>Digital:</i> Pulse-width modulated (up to 15 recirculations); Start/Stop (RS422 compatible)
Vibration Rating	5g/10-150 Hz/IEC standard 68-2-6
Maximum Cable Length	<i>Analog:</i> 50 feet <i>Digital:</i> PWM output, 150 feet RS422 Start/Stop 500 feet

* EMC test specification does not include sensor with the RB connection style. Sensor with RB connection style meets the following standard: DIN EN 50081-2 (emissions) and DIN EN 50082-1 (immunity).

Transducer Specifications – Balluff BTL-2®

Noncontact Transducer

The BTL-2 utilizes magnetostriction technology. Balluff offers a transducer design for rugged industrial environments wherever linear motion must be controlled. Two standard types of feedback outputs are available: analog and digital.

Selection of feedback output should be matched to the control systems to ensure optimum performance of the positioning system.

Specifications

Characteristic	Description/Specification
Supply Voltage	+24 Vdc \pm 10% or \pm 15 Vdc \pm 2%
Current Draw	<i>Analog:</i> 130 mA @ +24 Vdc, 100/50 mA @ \pm 15 Vdc <i>Digital:</i> Differential Start/Stop version; 110 mA @ 24 Vdc All Others: 35 mA @ 24 Vdc
Displacement Range	2" to 140" stroke
Null Space	Null space is 2" unless otherwise noted
Dead Band	Dead band is 2.36" from tip of transducer
Non-Linearity	\pm 0.01 " @ \leq 20" stroke \pm 0.03% of full scale @ $>$ 20" stroke
Repeatability	Resolution + Hysteresis
Hysteresis	\leq 0.00008"
Resolution	<i>Analog:</i> 0.1 mVdc; voltage outputs < 1.0 μ Adc; current outputs <i>Digital:</i> Defined by control
Temperature Coefficient	20 ppm/ $^{\circ}$ C
Operating Temperature	-13 $^{\circ}$ F to 176 $^{\circ}$ F (-25 $^{\circ}$ C to 80 $^{\circ}$ C)
Operating Pressure*	3000 psi continuous; 8700 psi static
Protection Class	IP67, NEMA 6
Sampling Rate	<i>Analog:</i> 1.0 KHz (per update) <i>Digital:</i> 2,800 m/sec./length (maximum)
Shock Rating	50g (single hit)
Vibration Rating	6g (10 to 150 Hz)
Housing Material	Anodized aluminum
Rod Material	Stainless steel 304
Maximum Cable Length	50 feet Voltage output 500 feet Current output 1500 feet Pulse output
Outputs	<i>Analog:</i> Voltage and current output available – see BTL-2 Series ordering guide <i>Analog Adjustability:</i> Null – minimum \pm 3%; maximum up to 10% of total stroke or \pm 2", whichever is smaller Full Scale – \pm 2% of total stroke <i>Velocity (optional):</i> 0 to \pm 10 Vdc, polarity of output defines direction of travel (4 to 20 mA velocity is also available) <i>Digital:</i> TTL level, nominal 0 and 5 V, true high, parallel transmission

*Compare these specifications to cylinder specifications. Use the proper limiting specification.

Transducer Specifications – RT

Contact Type Transducer

Linear Potentiometer – Method of Operations

The linear potentiometer device is rigidly attached to the cap end of the cylinder and runs the full stroke length inside a gun drilled piston rod. The transducer consists of a hardened aluminum extrusion in a shallow channel frame shape. A resistive plastic substrate material is bonded to one side of the channel and a conductive plastic substrate to the opposite side. A sliding wiper contact assembly is attached to the cylinder piston. As the piston rod moves through the stroke, the contacts conduct variable voltage changes from the resistive side to the conductive side.

Application Descriptions

This type of transducer provides accurate position feedback for low cycle, slow moving applications. When used in hydraulic applications, the transducer electric properties are dependent on nonconductive, noncontaminated operating fluids while the mechanical properties are dependent on nonvolatile, noncorrosive operating fluids. When used in pneumatic applications, the transducer depends on proper air filtration and drying to prevent contact wiper contamination. Avoid 'slick' type seal lubricants. The transducer mounting arrangement discourages infield repair. Duplicate cylinders with this transducer are recommended for spares if the application requires immediate turnaround.

Specifications

Characteristic	Description/Specification
Supply Voltage	+5 Vdc to +50 Vdc, bipolar or unipolar
Current Draw	1 microAmp maximum
Displacement Range	1" to 130", 1/8" increments
Non-Linearity	0.1% (1" to 46" stroke); 1.0% (47" to 130" stroke)
Repeatability	0.001"
Operating Temperature*	300°F
Operating Pressure*	5000 psi maximum
Transducer Life	500 million inches of travel
Cylinder Velocity	20 in/sec maximum hydraulic; 50 in/sec maximum pneumatic
Protection for Pressure Connector and Cable Assembly	NEMA 6P; IP68 (when cable is mated to pressure connector)
Washdown Pressure	1000 psi (when cable is mated to pressure connector)
Molded Cable Assembly	22 AWG: DVC insulated, metallic braid fine stranded copper conductors, yellow PVC jacketed, 300 V, 3 amp, 105°C U.L. recognized, C.S.A. certified
Maximum Cable Length from Cylinder to Signal Conditioning Electronics	20 feet
Maximum Cable Length from Signal Conditioning to User End	20 feet Voltage output 100 feet Current output
Output	Ratiometric

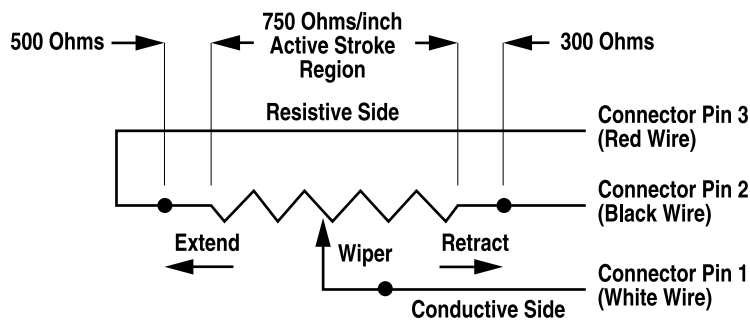

*Compare these specifications to cylinder specifications. Use the proper limiting specification.

Linear Potentiometer Equivalent Circuit

Definitions

Analog Output – Voltage output measured on an absolute scale that is relative to the position of the external magnetic source. The analog output scale goes from 0 to 10 Vdc, or from 10 to 0 Vdc. This version is self-interrogating.

Pulse Width Output – The duration of the output pulse is proportional to position. A digital counter card can be used to convert this output signal into a Binary Coded Decimal (BCD) or Natural Binary output.

Start/Stop – The output of the Start/Stop signal is compatible with RS422 output levels. The interrogation signal is a differential pulse, 1 µsecond wide.

Resolution – The smallest increment stroke that can be detected and indicated in an output. In a digital system, the theoretical resolution of the transducer's sensing element is less than .001 inches. The actual resolution of a system is a direct function of oscillating frequency in the circuitry responsible for counting or timing. Units for resolution are normally given as inches or millimeters per count. For example, at any length, 28 MHz yields a .004 inches/count resolution, whereas 56 MHz yields a .002 inches/count resolution. The sensitivity and design of the receiver's electronics and external wiring limit the resolution of analog outputs.

Gradient – The rate at which magnetostrictive pulses travel through the waveguide. This figure is about 9.05 µsec. per inch (0.356 µsec. per millimeter), but will vary slightly from one transducer to the next.

Update Time – The minimum time interval between interrogation signals. To calculate the update time for Start/Stop units, use the following formula:

$$\text{Update Time (in milliseconds)} = (S) (G) (2)$$

where

S = Maximum stroke length (e.g., active stroke in inches plus 2.62 inches, or active stroke in millimeters plus 66.5 millimeters).

G = Gradient (Gradient = approximately 0.00905 for English system of measurement, or 0.000356 for metric system)

Non Linearity – Maximum deviation of a measured input/output curve which plots measured displacement versus actual displacement. Expressed in a + or – percent of deviation of full scale.

Hysteresis – The potential difference in indicated position for the same point along a stroke length when reached from **opposite directions**. Repeatability defines the potential difference in indicated position for the same point when repeatedly reached from the **same direction**.

It is important to note the hysteresis specification for position sensors is significantly less than resolution and can, in most applications, be ignored.

Repeatability – The deviation in output value when a point along a stroke length is repeatedly approached from the same direction. *Example:* Read the output value as you arrive at point A from a particular direction. If you leave position A and then return to it from the same direction as before, the potential change in output value from the two readings is described by the repeatability specification.

Temperature Coefficient (TC) – The degree to which the output signal (e.g., the indicated position) is affected by ambient temperature changes. Expressed as parts per million/°F or °C.

Example (analog output sensor):

- Output: 0 to 10 Vdc
- Stroke Length: 10 inches
- Temperature Change: 10°C

If the output at 10 inches is 10 Vdc, the potential change in output per degree Centigrade temperature change is ≤0.0008 V (0.00008 x 10) or a total of 8 mV for a 10°C rise.

Asynchronous Operation/Internal Interrogation – Defines a system which consists of a pulse width modulated transducer and a customer supplied digital counter card or high speed counter. The transducer generates an internal interrogation signal at a fixed frequency. The frequency is determined by the stroke length and the number of recirculations.

Synchronous Operation/External Interrogation – In digital systems, this defines a system which consists of a pulse width modulated transducer using a customer generated or external interrogation pulse. This is a complex method of interrogation that requires special user-designed hardware and detailed knowledge of the sensor technology.

Recirculations (circulations) – In digital systems, a process that improves resolution of an LDT system. The on time of the pulse duration signal is multiplied by a specified factor (2 to 127). This provides more counting time for the counter, improving resolution. The process involves retriggering an interrogation pulse a fixed number of times.

$$\text{Recirculations} = 1 \div (G \times F \times R)$$

where

G = Gradient (approximately 9.05 µs per inch or .356 µs per millimeter)

F = Crystal frequency of the counter

R = Resolution (in inches or millimeters)

4-20 mA Output – Grounded versus Ungrounded

Ungrounded Output: If this output is grounded, the output will fail. The negative (return) line of the output is isolated from the power supply common and cannot be connected to the power supply common or to the power supply positive. In many installations you will find that the receiver device input is grounded to the same earth ground that the power supply common is grounded to. This would effectively connect the return to power supply common and the units will not function.

Grounded Output: This output uses the supply common as the return and is, therefore, “grounded” since it is recommended that the user ground the power supply common to earth ground.

Output Specifications – RT and Signal Conditioning Modules

Ratiometric Output

A ratiometric sensor output is directly proportional to the input source voltage. The user can take advantage of this by 'trimming' the sensor output to his specific needs by adjusting the input source voltage.

Scalable Analog Output Controller

This controller offers the user a scalable output that can be measured by a meter, PLC or other device. Available outputs are 0 Vdc to 10 Vdc, -10 Vdc to 10 Vdc and 4 mA to 20 mA. Supply voltage to the controller can be DC or AC. The units output is scalable over the stroke of the cylinder providing full scale linear output between two points, whether end of stroke or points in between.

Nonscalable Dual Set Point Controller

This controller offers the user infinitely adjustable, dual trip points anywhere along the stroke of the cylinder. The controller is available with 2-Triac, 2-relay or 2-transistor type outputs. Controllers are equipped with either a single turn set-point potentiometer or an optional multi-turn potentiometer for applications that require more resolution.

Dual Set Point Controller
Infinitely adjustable within cylinder stroke

Scalable Analog Output Controller
For continuous position output

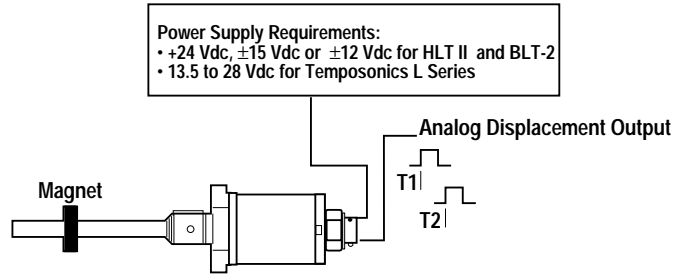

Specifications

Characteristic	Description/Specification
Enclosure Dimensions	3" High x 5 ⁵ / ₈ " Wide x 4 ⁵ / ₁₆ " Deep
Mounting Holes	3 ⁹ / ₁₆ " by 4 ⁷ / ₈ " center to center, 4 places
Shipping Weight	2 lbs.
Power Input Requirements	<i>AC (All Units):</i> 115 V, 60 Hz, .1 Amp <i>DC (Set Point Systems):</i> +15 Vdc, .1 Amp <i>DC (Indicator Systems):</i> +15 Vdc and -15 Vdc, 40 mA each supply <i>4 to 20 mA System:</i> +15 Vdc and -15 Vdc, 50 mA each supply
Input Fuse	.250 Amp
Output Specification – Set Point	<i>Relay (2):</i> 3 Amp @ 28 Vdc, 5 Amp @ 115 Vdc <i>Triac (2):</i> 2 Amp (60-115 Vac) <i>Transistor (2):</i> 10 mA
Output Specifications – Analog Output	0 to 10 V, 1 mA maximum output current (10K ohm impedance minimum) -5 to +5, -10 to +10 V, 1 mA maximum output current (10K ohm impedance minimum) 4 to 20 mA, into 500 ohm maximum impedance <i>Maximum Zero Offset:</i> 50% of cylinder stroke <i>Maximum Span Range:</i> 50% of cylinder stroke
Electronics Operating Temperature	40°F to 130°F

Output Specifications – HLT II, BLT-2 and Temposonics L Series

Analog Output Options

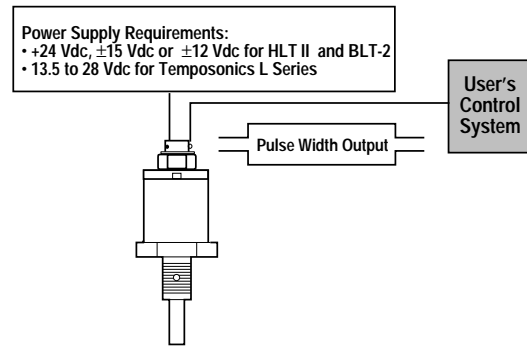

Analog Systems include a Linear Displacement Transducer, a magnet and the cable between the sensor and the customer electronics. The sensor generates the interrogation pulse, senses the return pulse and develops the analog output displacement signal (voltage or current). The HLT II has all of the electronics encased inside the cap of the cylinder.

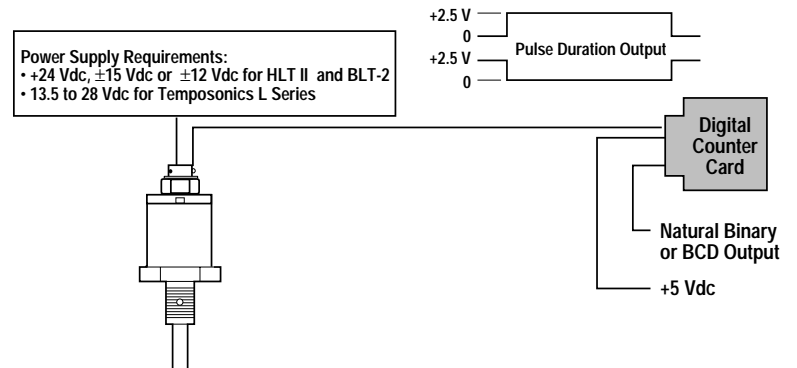

Digital Output Options

There are three digital output options available. Each provides a different type of digital output, either pulse width modulation, binary (natural binary or binary coded decimal) or an RS422 Start/Stop pulse output.

- 1) The digital PWM electronics are self contained in the transducer. The interrogation electronics provide a pulse width modulated TTL level output (no external signal conditioning required).

- 2) The PWM output, in conjunction with an externally mounted digital counter card, provides natural binary (18 bits) or BCD (4¹/₄ digits) output (using two counter cards would provided the capability to achieve 22 bit natural binary and 6 BCD outputs).

- 3) The RS422 output electronics are self contained in the transducer. A customer supplied 1 KHz square wave signal is required with this output option to produce an RS422 Start/Stop output.

N5 Cylinder Port Size Data and Location Information

Ports

Standard ports for N5 and WBN5 are SAE straight thread. AN5 and LAN5 standard ports are NPTF.

Optional and Oversize Ports

The chart at right lists port sizes. Larger welded half-pipe coupling ports are available in some sizes; please contact Hydro-Line.

Port Locations

Standard port locations are at No. 1, with optional locations No. 2, 3 or 4 furnished when specified, except where **H**, **U** or **W** mounts interfere at No. 2 and 4. Ports at No. 3 in **B** and the cap end of **E** mountings need special construction. Note possible piping interference with mounting screws in **A** cylinders ported at No. 2 and 4. Mounting holes are counterbored to allow access to them with piping in place. Request Engineering File P-26 for reference to dimensions.

Locations 1 through 4 indicate possible port positions. Number 1 is standard.

NOTE: Bore dimensions are 0.030" larger than NOMINAL.

Above are cylinder sizes for which the rod diameters in the column to the left are standard. Consult factory for rods larger than standard. Thrusts for pressures not shown in table, add the thrust for two or more operating pressures which combined equal the desired pressure.

Pipe Size Chart for Hydraulic Cylinders and Systems

Standard Weight Pipe			Oil Flow Gallons Per Minute And Friction Pressure Drop Pounds Per Square Inch Per Foot Length Of Pipe

2	2.067	3.355	5.5	12.0	1.20	57	25 to 125	50 to 250

* Inside diameter and areas shown are standard pipe. For tubing or extra heavy and double extra heavy pipe, use I.D. in table closest to your pipe or tubing I.D.

The pressure drop shown in the above table is for ordinary wrought iron pipe. For smooth, new wrought iron pipes, multiply the values shown by .7; for very smooth, straight tubing, multiply the values shown by .54. Pressure drop is the same regardless of operating pressure. Avoid large pressure drops in low pressure systems. Note that oil flows through large pipes at high velocity (up to 30 ft. per sec.) with small pressure loss. The pressure drop shown is for hydraulic oil with approximately 225 SSU at 100°F under average operating conditions. The values also apply to water. In order to accommodate large pump volumes without severe pressure drops, all Hydro-Line hydraulic cylinders are available with oversize ports with welded half pipe couplings or flange fitting.

1 Gallon = 231 Cubic Inches
 Oil consumption gal. per min = Gal. per in X in. per min. piston speed
 Air consumption cubic ft. per min = Cu. ft. per in X in. piston speed
 Free air consumption per in. of stroke = Cu. ft. displaced X (press. + 14.7) ÷ 14.7

N5 Series Mounting Dimensions

1 1/2" - 8" bore cylinders

N5F – Head Rectangular Flange Mount (NFA Style MF1)

N5R – Cap Rectangular Flange Mount (NFA Style MF2)

3 1/4" - 8" bores available for L Series/BTL-2.

NOTE: Possible mounting restrictions at Position 5.

N5G – Head Rectangular Mount (NFA Style ME5)

MOUNTING G ONLY

NOTE: Use the chart below for the cartridge retainer plate dimensions for the bore and rod combinations listed. See page 11 for all other mounting dimensions.

Bore	Rod Dia.	F	RA	RM	V
1 1/2	5/8	11/32	—	2 3/8	9/32
	1	1/2	2.44	2 5/8	3/8
2	1	1/2	—	2 5/8	3/8
	1 3/8	19/32	2.94	3 1/4	13/32
2 1/2	1 3/8	19/32	—	3 1/4	13/32
	1 3/4	19/32	3.44	3 7/8	17/32
3 1/4	1 3/4	19/32	—	3 7/8	17/32
	2	19/32	—	4	17/32

N5P – Cap Rectangular Mount (NFA Style ME6)

.3 1/4" - 8" bores available for L Series/BTL-2.

NOTE: Possible mounting restrictions at Position 5.

Maximum Operating Pressures in psi for F Mounting in Push

CYLINDER BORE	STANDARD ROD		2:1 PISTON ROD	
	Heavy Duty	Nonshock	Heavy Duty	Nonshock
5 & 6	1440	2400	1120	1840
7	1040	1760	720	1200
8	800	1350	640	1120

Maximum Operating Pressures in psi for R Mounting in Pull

CYLINDER BORE	STANDARD ROD		2:1 PISTON ROD	
	Heavy Duty	Nonshock	Heavy Duty	Nonshock
5 & 6	1800	3000	1400	2300
7	1300	2200	900	1500
8	1000	1700	800	1400

NOTE: When pressure must exceed the limitations above for mountings F and R, specify J or S mounting. (Up to a maximum of 3000 psi heavy duty, 5000 psi nonshock.)

Dimensions shown in purple are mounting dimensions.

NOTE: To determine piston thickness, subtract **G** and **J** dimensions from **LB** dimension.

NOTE: Additional port information on page 20.

○ Oversize rods affect dimensions in gray-shaded areas.

See pages 30-31 for these dimensions.

★ Add stroke to all starred dimensions.

■ Requires full front square retainer.

NOTE: Overall length dimensions that require addition of stroke may vary from dimensions shown, due to manufacturing tolerances.

▲ Use **FH** dimension in place of **F** dimension and **VB** dimension in place of **V** dimension.

♦ The **JJ** dimension is the cover plate thickness for the HLT II electronics. A square cover plate is required on the 2" bore size while all others receive a circular type.

‡ Use screws ⅛" smaller than mounting holes.

• Port dimensions for standard ports only. Consult Hydro-Line for flange, manifold and special ports.

— No additional **C** required for a Style 4 rod end.

Refer to ordering code on pages 9, 11, 13 and 15:

※ Sensor cover not available for 1½" bore.

※ A, B & C sensor cover options available for 2" bore.

❖ A, B & C sensor cover options available for 2" and 2½" bore.

■ A, B & C sensor cover options available for 2"-3¼" bore.

∞ A, B & C sensor cover options available for 2"-8" bore.

◇ B & C sensor cover options available for 2"-8" bore.

♣ All sensor cover options available for 2½"-8" bores.

○ All sensor cover options available for 3¼"-8" bores.

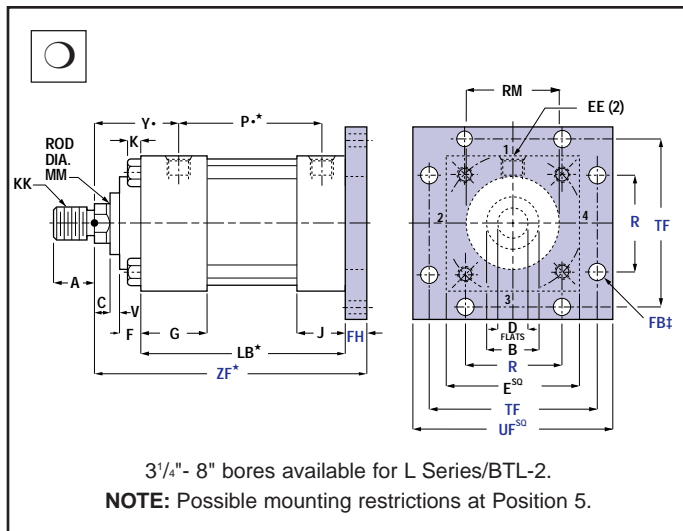

Ω All sensor cover options available for 4"-8" bores.

NOTE: Consult factory on applications requiring cushions or bores over 8".

NOTE: Consult factory on applications requiring 1½" bore HLT II.

N5 Series Mounting Dimensions

N5S – Cap Square Flange Mount (N5S)

N5 – Extended Key Plate – Available when specified

N5J – Head Square Flange Mount (N5J)

N5B – Side Tapped Mount (N5B)

N5K (No Mount), N5L (N5L), N5M (N5M), N5N (N5N) – Tie Rods Extended Mounts

N5E – Side End Lugs Mount (N5E)

Dimensions shown in purple are mounting dimensions.

NOTE: To determine piston thickness, subtract **G** and **J** dimensions from **LB** dimension.

NOTE: Additional port information on page 20.

○ Oversize rods affect dimensions in gray-shaded areas.

■ See pages 30-31 for these dimensions.

★ Add stroke to all starred dimensions.

■ Requires full front square retainer.

NOTE: Overall length dimensions that require addition of stroke may vary from dimensions shown, due to manufacturing tolerances.

▲ Use **FH** dimension in place of **F** dimension and **VB** dimension in place of **V** dimension.

◆ The **JJ** dimension is the cover plate thickness for the HLT II electronics. A square cover plate is required on the 2" bore size while all others receive a circular type.

‡ Use screws 1/16" smaller than mounting holes.

• Port dimensions for standard ports only. Consult Hydro-Line for flange, manifold and special ports.

– No additional **C** required for a Style 4 rod end.

Refer to ordering code on pages 9, 11, 13 and 15:

⊛ Sensor cover not available for 1½" bore.

⊛ A, B & C sensor cover options available for 2" bore.

⊛ A, B & C sensor cover options available for 2" and 2½" bore.

■ A, B & C sensor cover options available for 2"-3¼" bore.

∞ A, B & C sensor cover options available for 2"-8" bore.

⊛ B & C sensor cover options available for 2"-8" bore.

⬤ All sensor cover options available for 2½"-8" bores.

○ All sensor cover options available for 3¼"-8" bores.

Ω All sensor cover options available for 4"-8" bores.

NOTE: Consult factory on applications requiring cushions or bores over 8".

NOTE: Consult factory on applications requiring 1½" bore HLT II.

N5 Series Mounting Dimensions

1½" - 8" bore cylinders

N5A – Side Lugs Mount (NFFA Style MS2)

N5H – Center-Line Lugs Mount (NFFA Style MS3)

† Maximum width of mating part.
Available with RT only.

N5C – Cap Fixed Clevis Mount

† Maximum width of mating part.
Available with HLT II and RT only.

N5DC – Cap Detachable Clevis Mount (NFFA Style MP2)

† Maximum width of mating part.
2" - 8" bores available for L Series and BTL-2 only.

N5C – Cap Fixed Clevis Mount

† Maximum width of mating part.
2" - 8" bores available for L Series and BTL-2 only.

N5DC – Cap Detachable Clevis Mount (NFFA Style MP2)

∞ A, B & C sensor cover options available for 2"-8" bore.

⊛ B & C sensor cover options available for 2"-8" bore.

♣ All sensor cover options available for 2 1/2"-8" bores.

○ All sensor cover options available for 3 1/4"-8" bores.

Ω All sensor cover options available for 4"-8" bores.

NOTE: Consult factory on applications requiring cushions or bores over 8".

NOTE: Consult factory on applications requiring 1 1/2" bore HLT II.

N5 Oversize Rod Information

The dimensions listed on these two pages are those that change when oversize rods are used.

Dimensions shown in purple are mounting dimensions.

NOTE: To determine piston thickness, subtract G and J dimensions from LB dimension.

NOTE: Additional port information on page 40.

Oversize rods affect dimensions in gray-shaded areas.

See page 46-47 for these dimensions.

★ Add stroke to all starred dimensions.

■ Requires full front square retainer.

NOTE: Overall length dimensions that require addition of stroke may vary from dimensions shown, due to manufacturing tolerances.

▲ Use FH dimension in place of F dimension and VB dimension in place of V dimension.

♦ The JJ dimension is the cover plate thickness for the HLT II electronics. A square cover plate is required on the 2" and 2½" bore sizes while all others receive a circular type.

‡ Use screws 1/16" smaller than mounting holes.

— No additional C required for a Style 4 rod end.

• Port dimensions for standard ports only. Consult Hydro-Line for flange, manifold and special ports.

Refer to ordering code on pages 9, 11, 13 and 15:

⊛ Sensor cover not available for 1½" bore.

⊛ A, B & C sensor cover options available for 2" bore.

⊛ A, B & C sensor cover options available for 2" and 2½" bore.

■ A, B & C sensor cover options available for 2"-3¼" bore.

∞ A, B & C sensor cover options available for 2"-8" bore.

⊛ B & C sensor cover options available for 2"-8" bore.

▲ All sensor cover options available for 2½"-8" bores.

○ All sensor cover options available for 3¼"-8" bores.

Ω All sensor cover options available for 4"-8" bores.

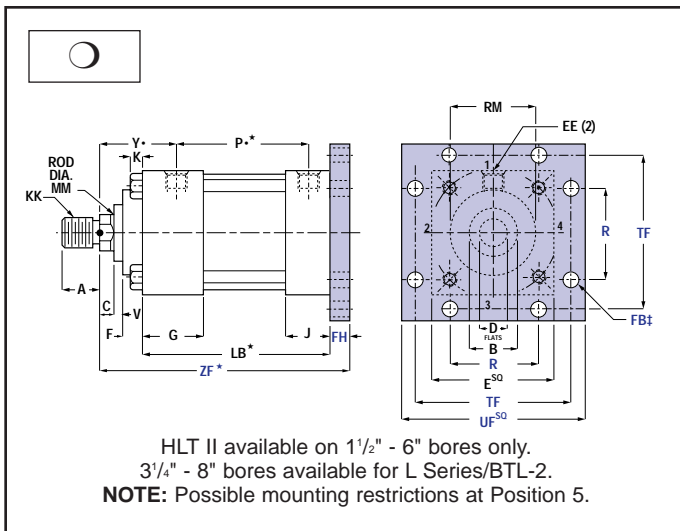

NOTE: Consult factory on applications requiring cushions or bores over 8".

NOTE: Consult factory on applications requiring 1½" bore HLT II.

HR5 Series Mounting Dimensions

1 1/2" - 8" bore cylinders

HR5S – Cap Square Flange Mount (NFFA Style MF6)

HR5R – Cap Rectangular Flange Mount (NFFA Style MF2)

HR5J – Head Square Flange Mount (NFFA Style MF5)

HR5F – Head Rectangular Flange Mount (NFFA Style MF1)

HR5K – No Mount, HR5L (NFFA Style MX1), HR5N (NFFA Mount Style MX2), HR5M (NFFA Style MX3) – Tie Rods Extended Mounts

HR5TT – Intermediate Fixed Trunnion Mount (NFFA Style MT4)

⊛ Sensor cover not available for 1 1/2" bore.

⊛ A, B & C sensor cover options available for 2" bore.

⊛ A, B & C sensor cover options available for 2" and 2 1/2" bore.

■ A, B & C sensor cover options available for 2"-3 1/4" bore.

∞ A, B & C sensor cover options available for 2"-8" bore.

◇ B & C sensor cover options available for 2"-8" bore.

◆ All sensor cover options available for 2 1/2"-8" bores.

○ All sensor cover options available for 3 1/4"-8" bores.

Ω All sensor cover options available for 4"-8" bores.

NOTE: Consult factory on applications requiring cushions or bores over 8".

NOTE: Consult factory on applications requiring 1 1/2" bore HLT II.

HR5 Series Mounting Dimensions

1½" - 8" bore cylinders

HR5A – Side Lugs Mount (NFFA Style MS2)

HR5H – Center-Line Lugs Mount (NFFA Style MS3)

3¼" - 8" bores available for L Series/BTL-2.

HR5B – Side Tapped Mount (NFFA Style MS4)

3¼" - 8" bores available for L Series/BTL-2.
NOTE: Bottoms of heads and caps are mounting surfaces.
 Lugs hold cylinder against mounting surface.
NOTE: Possible mounting restrictions at Position 5 on smaller bores.

HR5E – Side End Lugs Mount (NFFA Style MS7)

HR5 – Extended Key Plate (available when specified)

Dimensions shown in purple are mounting dimensions.

NOTE: To determine piston thickness, subtract G and J dimensions from LB dimension.

NOTE: Additional port information on page 40.

○ Oversize rods affect dimensions in gray-shaded areas. See page 46-47 for these dimensions.

★ Add stroke to all starred dimensions.

■ Requires full front square retainer.

NOTE: Overall length dimensions that require addition of stroke may vary from dimensions shown, due to manufacturing tolerances.

▲ Use FH dimension in place of F dimension and VB dimension in place of V dimension.

♦ The JJ dimension is the cover plate thickness for the HLT II electronics. A square cover plate is required on the 2" and 2½" bore sizes while all others receive a circular type.

‡ Use screws 1⁄16" smaller than mounting holes.

1 No additional C required for a Style 4 rod end.

• Port dimensions for standard ports only. Consult Hydro-Line for flange, manifold and special ports.

Refer to ordering code on pages 9, 11, 13 and 15:

⊛ Sensor cover not available for 1½" bore.

⊛ A, B & C sensor cover options available for 2" bore.

⊛ A, B & C sensor cover options available for 2" and 2½" bore.

■ A, B & C sensor cover options available for 2"-3¼" bore.

∞ A, B & C sensor cover options available for 2"-8" bore.

⊛ B & C sensor cover options available for 2"-8" bore.

♣ All sensor cover options available for 2½"-8" bores.

○ All sensor cover options available for 3¼"-8" bores.

Ω All sensor cover options available for 4"-8" bores.

NOTE: Consult factory on applications requiring cushions or bores over 8".

NOTE: Consult factory on applications requiring 1½" bore HLT II.

HR5 Port Size Data and Location Information

Ports

Standard ports for HR5 are SAE straight thread. R5 and LR5 standard ports are NPT.

Optional and Oversize Ports

The chart at right lists port sizes. Larger welded half-pipe coupling ports are available in some sizes, please contact Hydro-Line.

Port Locations

Standard port locations are at No. 1, with optional locations No. 2, 3 or 4 furnished when specified, except where **H**, **U** or **W** mounts interfere at No. 2 and 4. Ports at No. 3 in **B** and the cap end of **E** mountings need special construction. Note possible piping interference with mounting screws in **A** cylinders ported at No. 2 and 4. Mounting holes are counterbored to allow access to them with piping in place. Request Engineering File P-26 for reference to dimensions.

Locations 1 through 4 indicate possible port positions. Number 1 is standard.

* Only available in noncushioned design.

Hydro-Line Technical Data

Rod Size and Stop Tube Selection

Rod Size Selection

Standard rod sizes are normally suitable for all applications except for long stroke or high thrust applications. Proper selection of minimum rod size may be determined by the following steps:

1. With knowledge of bore size and operating pressure, thrust may be determined. Refer to graph in next column.
2. Select from illustrations above the type of mounting to be used and determine the length of **D** with the piston rod in the fully extended position.
3. Find the value of **D** at the bottom of the graph and follow its line vertically until it intercepts the horizontal line representing the maximum push thrust that will be applied to your cylinder. The intersection of these two lines will fall within a stripe representing the minimum recommended piston rod diameter for your application.

Stop Tubes

Stop tubes are located between the piston and the rod shoulder on the head end of the cylinder. Bearing loading is reduced by separating the piston and the rod bushing. Bearing wear and tendency to buckle is reduced.

To determine if a stop tube is required and the length of stop tube needed, use the following procedure:

Determine the value of **D** with the piston rod in the fully extended position. If the value of **D** is under 40", no stop tube is needed. If **D** is greater than 40", one inch of stop tube is recommended for each 10" or fraction thereof beyond 40".

Special note: When specifying stroke and stop tube lengths, please include net working stroke plus stop tube length.

Valve and Manifold Accessories

Hydro-Line offers two methods of hydraulic manifolds, piping and integral. The standard method is piping with integral manifolds used for short stroke cylinders as shown below. Special options are available, including regeneration

mode, reverse mounting and operation, drainback and straddle block design, oversize or special porting or special patterns².

(Applies to Mounting Patterns 1, 2 & D03)

Table 1 – Standard Valves and Manifold Patterns Available²

Control Valve Series	A	B	C	D	E	F	G	H	J	K	L	M
Mounting Pattern 1	1.50	3.25	3.75	.469	.469	.672	1.344	.844	1.688	1/4-20	.312	#8

D03 Mounting Pattern	1.50	3.25	3.75	.344	.422	.610	1.280	.750	1.590	10-24	.250	#6

Table 2

Bore Diameter	Minimum Stroke Requirements for Manifold Block Applications	
	SN5	SHR5
1 1/2	3	4
2	3	4
2 1/2	3	3 1/2
3 1/4	2 1/2	3 1/2
4	2	3 1/2
5	2	3
6	1 1/2	3
7	1	N/A
8	1/2	2 1/2

¹ Integral manifold used for cylinders with strokes less than the minimum requirement shown in Table 2 at left.

² Specify "X" valve order code for values or options not shown in Table 1 or 2, or for special manifold requirements. Specify manufacturer, model, flow and pressure requirements on Electronic Feedback Application Data Sheet. Include any special instructions for manifold pattern, porting, mounting styles or applicable drawings.

Mounting Accessories

Standard Eye Bracket

Swivel Eye Bracket*

(Swivel includes spacers to allow swivel action up to 7° and to make dimensions interchangeable with standard eye bracket.)

For mounting dimensions over 12" bore, consult Hydro-Line.

ONE YEAR LIMITED WARRANTY

One Year Normal Use

Hydro-Line Products are warranted for a period of one year from date of shipment from our plant to be free from defects in workmanship and material under correct use, normal operating conditions and proper applications. This warranty does not extend to goods damaged, or subjected to accident, abuse, or misuse after shipment from our factory, nor to goods altered or repaired by anyone other than authorized Hydro-Line representatives.

Disclaimers

This one year limited warranty is the only warranty extended by Hydro-Line in connection with any sale by Hydro-Line. THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, notwithstanding disclosure to Hydro-Line of the product's intended use. An affirmation of fact or promise made on behalf of Hydro-Line shall not be deemed to create an expressed warranty that the goods shall conform to the affirmation of promise; any description of the goods is for the sole purpose of identifying them and shall not be deemed to create an expressed warranty that the goods shall conform to such description; any sample or model is for illustrative purposes only and shall not be deemed to create an expressed warranty that the goods shall conform to the sample or model; and no affirmation or promise, or description, or sample or model, shall be deemed part of the basis of the bargain.

Exclusive Remedy

Hydro-Line's obligation upon breach of warranty shall be limited to replacing or repairing at our option, free of charge, but not including installation,

dismantling, reassembling or any other charge, the particular product or part which inspection discloses to have been defective at time of shipment. Inspection may be at the place of installation and use, or at our plant if returned to us at our expense including lowest transportation cost, is requested. Written notice of such defect shall be given by customer to Hydro-Line within 30 days after such defect(s) appear. Written permission for any warranty claim return must be first obtained from authorized Hydro-Line representatives. All returns must be accompanied with a complete written explanation of claimed defects and the circumstances of operational failure. Replacement of cylinders or parts thereof repaired under this warranty shall be warranted under the terms of this warranty for the remainder of the term of the original warranty or for a period of six months after such repair or replacement, whichever is longer. Upon expiration of the warranty, all of Hydro-Line's obligations hereunder shall terminate.

IN NO EVENT SHALL HYDRO-LINE HAVE ANY LIABILITY FOR PAYMENT OF ANY CONSEQUENTIAL, INCIDENTAL, INDIRECT, SPECIAL OR TORT DAMAGES OF ANY KIND INCLUDING, BUT NOT LIMITED TO, ANY LOSS OF PROFITS, TO THE EXTENT EXCLUSION IS PERMITTED BY LAW.

This warranty states our entire and exclusive liability and buyer's exclusive remedy for any claim of damages in connection with the sale or furnishing of Hydro-Line's products or parts, their design, suitability for use, installations or operation, or for any claimed defects therein. Goods not manufactured by Hydro-Line are furnished subject only to the Manufacturer's warranties, if any, and without warranties, expressed or implied, by Hydro-Line.

HYDRO-LINE Actuation Products

N5 SERIES CYLINDERS

- NFPA interchangeable
- **N5** – 3000 psi nominal hydraulic
- **AN5** – to 250 psi very heavy-duty pneumatic
- **LAN5** – to 250 psi very heavy-duty pneumatic – permanently lubricated
- All steel construction

R5 SERIES CYLINDERS

- NFPA interchangeable
- **A5/R5** – to 250 psi pneumatic
- **LA5/LR5** – to 250 psi pneumatic – permanently lubricated
- **HA5** – to 400 psi hydraulic
- **HR5** – 1500 psi nominal hydraulic

Q5 SERIES CYLINDERS

- NFPA interchangeable
- **Q5** – to 250 psi pneumatic
- **LQ5** – to 250 psi pneumatic – permanently lubricated
- **HQ5** – to 400 psi hydraulic
- Aluminum construction

HM SERIES CYLINDERS

- Conform to international metric specifications ISO 6020/2 and DIN 24 554
- 25 mm to 200 mm bore sizes
- 210 BAR nominal hydraulic
- All steel construction

ROCKFORD SERIES CYLINDERS

- ASAE interchangeable agricultural cylinders
- **Rockford 2500**–2500 psi hydraulic
- **Rockford 3000**–3000 psi hydraulic

ELECTRONIC FEEDBACK CYLINDERS

Hydraulic or pneumatic cylinders which incorporate cylinder position sensing and feedback throughout the stroke. Available in N5, R5, A5, Q5, HM, HW, SM or special cylinders.

SERIES 20/30 BOOSTERS

- Standard series to 5000 psi output
- Custom designs to 20,000 psi

T SERIES AIR/OIL TANKS

- All steel construction

QT SERIES AIR/OIL TANKS

- Aluminum end caps and translucent tubing

V5 SERIES CYLINDERS

- NFPA Interchangeable
- To 200 psi pneumatic
- Aluminum construction
- Now available in 5", 6" and 8" bore

HW SERIES CYLINDERS

- Welded construction
- 3000 psi nominal hydraulic

TSAYER CYLINDERS

- Threaded body construction
- To 200 psi pneumatic
- To 1000 psi nominal hydraulic

SM SERIES CYLINDERS

- Steel mill type construction
- **MSM**–2000 psi nominal hydraulic
- **HSM**–3000 psi nominal hydraulic
- **ASM**–Pneumatic

CUSTOM CYLINDERS

- Custom cylinders to meet special requirements
- Bores to 48"
 - Strokes to 300"
 - Pressures to 10,000 psi or higher
